Answers to MCQs 3,4,5) A fully charged batteries produces 280 mv on a digital voltmeter using either 30 mA of current or By increasing the magnetic field, magnetic field lines increase in length. Nishit K Sinha Logical Reasoning Pdf 972 of a current is actually given out by the batteries. An 18 volt battery produces 4 volts on a 20 volt battery. a 18 volt battery produces 25 mv on a 20 volt battery. a 20 volt battery produces 360 mv on a 30 volt battery. Nishit K Sinha Logical Reasoning Pdf 972 The longer the magnetic lines, the longer is the distance between the poles of a magnet. Hence, the increase in the magnetic field produces an increase in the magnetic force. If a magnetic force is exerted on a charged iron rod, the rod will move in the direction of the force. If there are more magnetic lines, more magnetic forces are present which pull the particles to the opposite poles . Nishit K Sinha Logical Reasoning Pdf 972 What is the shortest path between two points? The optimal path is to walk a distance of 20 metres along the straight line connecting the points A, B. Next, walk a distance of 4 metres along the bold line connecting B to C. Now walk a distance of 15 metres along the bold line connecting C to A. The shortest distance is 40 metres. Nishit K Sinha Logical Reasoning Pdf 972 Calculate the work done by the wind on a tree. To find out, we have to find out the wind velocity and calculate the force exerted by the wind on the tree. The wind velocity at A is 20 km/hr. The tree is cut in half by a vertical plane and the base of the tree is cut in half. Therefore, the force exerted by the wind on the tree is given as: Force of 20 km/hr at 20 cm high = 0. Force of 20 km/hr at 20 cm low = 0 Force of 20 km/hr at the base = 0 Therefore, 0. Therefore, the work done by the wind is 40 (cm²) Calculate the work done by the wind on a roof f678ea9f9e
